

APT 1020 C++ PROGRAM

PROJECT USER MANUAL.

Introduction.

The Sprinter Scholarship program was designed to enable collection of information about runners and their capability to acquire a scholarship if they meet the qualifications required after they have run and the average for each is taken. Once the average is taken, the program will determine whether the sprinter is eligible for the scholarship. The program provides a simple way of data collection and interpretation instead of the manual way of using pen and paper. This program runs on C++ and information is viewed through the terminal. Basically, the system takes up information and processes it giving detailed feedback on the state of the data that was previously presented with.

How to use the program

1. the program has simple and clear way on how to use the it.
2. Open the program using a C++ compiler.
3. Run it and a console output will appear with instructions on how to use the program
4. Follow the instruction carefully as stated.
5. The inputs needed are gender and the name of the sprinter and options for easy use of the program which are either 1,2,3,0 or as directed.
6. To edit the inputs, use the options provided in the program once it has run.
7. To terminate the program always use option 0 unless otherwise stated.
